**Subject:** Potential High Flow SV-CWCM Event - Time Critical - Pls Read

There is a prediction of a significant precipitation event due to arrive in NJ on Tuesday (2/26) during the late afternoon. The predicted hydrograph at Little Falls shows a rise to 3350 cfs, with no crest yet predicted (hydrograph goes out to 07:00 Thursday 2/28).

OSI needs a Go-No Go decision by noon today; AECOM has given OSI a Go to mobilize subject to agreement with EPA that the High flow event will be sampled.

This will incur some costs associated with pulling permits and organizing staff. AECOM is still working to get all staffing in place as well.

Kristen has contacted George Molnar.

We will keep you up to date on our schedule (which is very dynamic and based on predicted flows) and any staffing concerns. AECOM has a lot of highly trained staff, and they are working to free them up on short notice right now.

R/  
Rob
